

### Centre Service Coordination: Supports to Child Care

The vision for Centre Service Coordination is for child care centres to have access to collaborative, coordinated and efficient services. In Halton, child care programs may be working with a number of services. Collaborative work towards common goals and on-going communication between the child care program and community services is beneficial and increases success.

Other (as in ErinoakKids classwide Speech and Language Services) \_\_\_\_\_

Centre service coordination brings together the centre and all services working with the centre for the purpose of providing access to collaborative, coordinated and efficient services. The process is intended to:

- Increase clarity of who does what
- Decrease any potential for duplication of service
- Decrease potential of competing expectations
- Coordinate services
- Establish an effective approach to communicate across services
- Focus on priorities identified by the centre

Information shared across services will be for the purpose of working with the centre to achieve goals. A centre may request certain information not be shared. Information related to an individual staff or family is considered confidential and will not be shared for the purpose of centre service coordination.
